

Maintain a healthy weight

For men, keeping your waistline **under 94 cm** can reduce your risk of some cancers, such as bowel, prostate and kidney. Speak to your Aboriginal Health Practitioner or GP today about how you can start making healthy changes.

Limit or avoid alcohol

If you don't drink alcohol, well done!

If you do choose to drink, the more you drink and the longer you have been drinking for, the greater the risk of cancer. By avoiding binge drinking and limiting the amount of alcohol you consume to two standard drinks per day, you can reduce your risk of some cancers such as liver, mouth, throat, lung and bowel cancer. Include as many alcohol free days as you can across the week.

Be SunSmart

The sun can damage all skin types. When the **UV is 3 and above**, it's important to protect your skin. Download the SunSmart app to check daily sun protection times.

Slip on clothes that cover your arms and legs

Slop on SPF 30 or higher, broad spectrum, water resistant sunscreen and reapply every two hours

Slap on a broad brimmed hat or one that covers the head, face, neck and ears

Seek shade, particularly over the middle part of the day when UV is highest

Slide on close fitting sunglasses

About Cancer Council SA

Cancer Council SA is South Australia's leading, independent, non-government cancer control organisation. We are dedicated to helping South Australians reduce their cancer risk and receive the best cancer care.

Mission

To lead, empower and mobilise the community to contribute to a cancer free future.

Men— Cut your cancer risk.

Many cancers can be prevented by making some lifestyle changes and most cancer types can be treated if they are found early. See inside to find out what you can do to reduce your risk of cancer.

Check for unusual changes in the body and have regular screening tests

Men aged 50–74 should complete a bowel cancer screening test every two years to pick up the early signs of bowel cancer. The National Bowel Cancer Screening Program sends free home test kits in the post to eligible men every two years. If you receive a test kit, put some time aside to complete and return it.

It is important for you to know what is normal for you. See your **Aboriginal Health Practitioner or GP** if you notice any symptoms, or if you are worried about your family history of cancer. Call **Cancer Council 13 11 20** if you have any questions about cancer screening or have a family history of bowel cancer.

Be smoke free

No amount of smoke is good for you, including second-hand smoke.

Quitting smoking and creating smoke free environments reduces your risk of 16 different cancers.

Call an Aboriginal Quitline counsellor today on 13 7848.

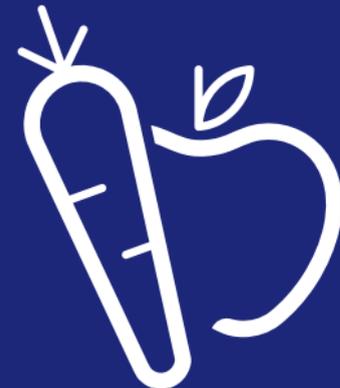

Be active

Only **30 minutes of vigorous** or 60 minutes of moderate-intensity exercise a day can help reduce your risk of some cancers, including bowel cancer.

Exercise can be broken up across the day and any increase in exercise is good for you.

Eat a healthy diet

It's as easy as two fruit and five vegetables a day. Throw in plenty of wholegrain or wholemeal foods.

Limit red meat to no more than 455g of cooked weight per week, and swap for chicken, fish or vegetarian options.

Choose **low-fat dairy products** and **limit the amount of sugary drinks and junk foods.**

Get immunised

Hepatitis B and liver cancer

Infection with hepatitis B is the biggest known risk factor for developing primary liver cancer. Hepatitis B may not cause any symptoms, so it is important to be tested and vaccinated. Speak with your GP if you are concerned about your risk. Visit hepatitissa.asn.au for more information.

Human Papillomavirus (HPV)

The HPV vaccine helps prevent HPV-related cancers including cancers of the genitals and throat. Children receive the vaccine for free in high school. Visit hpvvaccine.org.au for more information.
